Mr. Uldis Karins  
Assistant County Engineer  
New Castle County Engineering Bldg.  
P. O. Box 165  
Wilmington, Delaware 19899

Dear Mr. Karins:

Enclosed are some graphs representing the water quality changes in the wells at the Tybouts Corner Sanitary Landfill. This data covers the period of July 1969 to December 1969.

The water quality in these wells has changed somewhat since the last six months progress report in August 1969, but the changes have not been very pronounced. There has been some general increase in the concentration of some parameters (specific conductance, alkalinity) around October 1969, which decreased to a lower value in December 1969. The overall water quality of these wells has not yet shown any significant contamination.

We should be formalizing our next fiscal year's programs in the water quality surveillance of the Tybouts Corner Landfill right now. We would appreciate discussing next year's contract with you at your convenience.

Sincerely yours,

*SKB*  
S. K. Banerji
